Maak kennis met tangram! Welke vormen maken samen het figuur?

The image shows a large blue square divided into four quadrants by a central diamond shape. In the center of the diamond is a figure of a caterpillar. The caterpillar's body is composed of four hexagons (orange, green, yellow, green, red) and four triangles (orange) at the bottom. It has two blue triangles for antennae. Surrounding the central figure are various geometric shapes: hexagons, triangles, and diamonds in different colors (green, red, yellow, blue, orange). There are also four empty circles, one in each quadrant, intended for students to place the pieces that form the caterpillar.
